Muhammad Irfan

Full-Stack Laravel Developer

Pakistan | Working remotely | github.com/irfaaan | irfaaan.github.io

I mostly build Laravel backends and the admin panels that go with them.

SUMMARY

I have 2+ years of production experience working in Laravel. Most of my work is on the backend: REST APIs that web and mobile clients use, admin panels for running a platform day to day, and deployment on Linux servers.

I also work with Vue.js on the frontend and have built real-time features where a project needed them. My production work so far includes a sports platform, a fitness app backend, a multi-service platform and a restaurant dining and table-booking platform. Alongside that, I build my own projects from scratch and run them myself.

EXPERIENCE

Laravel Developer
2024 - Present

Alright Tech

- I build and maintain the backends for three live products: Soccer (sports platform), the Martial App (fitness) and Better Horizon (multi-service).
- REST APIs for the web and mobile clients.
- Admin panels too, and the real-time features in these apps.

Stack: Laravel, REST APIs, MySQL, Vue.js

Backend Developer
2023 - 2024

Nafisol - My Events

- Built the My Events platform in Laravel: restaurant website with dining table booking - live table availability and reservations by date, time and guests.
- The admin dashboard was also my work. It runs in production with the platform.

Stack: Laravel, jQuery, MySQL, admin panels

System Architect
Planned

Mall of Karor - E-commerce

- Planned project - the build has not started yet. This is architecture scope and planning only. I mapped out a 25-module online superstore system: customer app, rider app and an admin panel.
- I wrote the REST API specification and the database schema, and broke the build into phases.

Stack: System design, API specification, database schema

CORE WORK

Backends
Laravel applications, Eloquent data models and REST APIs for real clients. This is most of my work.

Real-time
WebSockets and push notifications (FCM).

Admin panels
Role-aware dashboards for managing a platform day to day.

Servers
Linux / Ubuntu, nginx, systemd services and Git-based delivery.

SELECTED PROJECTS

1. GMC PRO - Live Gold Analysis Platform

My own project. It analyses live XAU/USD (gold) prices, with a Python backend and around 80 analysis tools. One part of it is a verdict engine, which pulls the separate analyses into a single view. I built it, deployed it and I maintain it myself.

Stack: Python, live market data | **Live:** goldchart.duckdns.org

2. Mall of Karor - Superstore OS (Planned)

Planned project - not yet started. A blueprint for an online superstore, 25 modules in total. Customer app, rider app and admin panel, with the REST API specification, the database schema and a phased build plan.

Stack: Laravel, Flutter, MySQL

3. My Events - Nafisol

Restaurant website with dining table booking - live table availability and reservations by date, time and guests. In production, with an admin dashboard.

Stack: Laravel, jQuery, MySQL

4. Soccer Platform - Alright Tech

Backend for a production sports platform. It covers matches and teams, live data endpoints, and the admin tooling behind the platform.

Stack: Laravel, REST API, Vue.js

5. Martial App Backend - Alright Tech

Backend for a production fitness app, with training programs and user progress tracking. Push notifications and an admin panel are part of it as well.

Stack: Laravel, FCM, MySQL

6. WhatsApp Cloud API Bot

A bot built and tested on the official Meta WhatsApp Cloud API. It runs on Node.js / Express, works through webhooks, and has interactive menus in Urdu and English. I deployed it as a systemd service behind a Cloudflare Tunnel.

Stack: Node.js, Express, Meta WhatsApp Cloud API, Cloudflare Tunnel

TECHNICAL SKILLS

Backend: Laravel / PHP, Eloquent ORM, Blade, Livewire, REST APIs, Node.js, Python

Frontend: Vue.js, Inertia.js, JavaScript, jQuery

Data & real-time: MySQL, PostgreSQL, Redis, WebSockets, FCM push notifications

Servers & tools: Linux / Ubuntu, nginx, Git / GitHub

CERTIFICATIONS

- Online certificates from Google, GreatLearning and Eduonix.
- Eduonix - White Hat Hacker / Penetration Tester certificate.

EDUCATION

ICS - Intermediate in Computer Science, 2016.

AVAILABILITY

I am based in Pakistan and I work remotely. I am available for freelance projects and for remote roles in Laravel and full-stack web development. My portfolio is at irfaaan.github.io and my code is at github.com/irfaaan.
